Initial check

What number of requests don't have the same product_cd for all their inquiries? (Out of 319,733):
13,649

What number and percentage of *List requests* have this property?
Number: *13,088*
Percentage: *4.116 %*

What number and percentage of *individual List inquiries* have this property?
Number: *217,503*
Percentage*: 5.078369 %*

Regressions run

```
subset <- df.inquiry %>% filter(pt == 0,
                product_cd == "USHY",
                p_type != "Broker-Dealer",
                list_length >= 20,
                numsublists < list_length/2,
                5 < sublist_length)

regr1 <- felm(filled ~ trans_cost + mediancost_insublist + mediancost_outsidesublist |
                req_id | 0 | req_id + date, data = subset)

regr2 <- felm(filled ~ trans_cost + mincost_insublist + mincost_outsidesublist | req_id | 0 |
                req_id + date, data = subset)
```

	Estimate	Cluster.s.e.	t.value	pval
